

Montadiol

0,01 % Cream

Treatment of vaginal atrophy

Montadiol

0,01 % Cream

Composition

1 g cream contains 0.10 mg oestradiol

Therapeutic indications

Treatment of vaginal atrophy due to oestrogen deficiency in postmenopausal women. The maximum duration of treatment is 4 weeks.

Characteristics

When applied topically, oestradiol primarily regulates vaginal physiology with positive effects on blood perfusion, tissue strengthening, pH-reduction and increased secretion.

Dosage

One filled applicator dose (= 2 g cream) is inserted before retiring to bed. In the first week of treatment, Montadiol 0.01 % Cream should be applied on every other day, i.e. at 48-hourly intervals, and twice weekly thereafter (maintenance dose).

Dispensary

On prescription

Packs

Aluminium tubes containing 25 grams, with PE-LD applicator (equivalent to 2 g cream when filled up to maximum capacity) in a folding carton.

For further information on safe use, precautions, interactions and undesirable effects please refer to the instructions for use or to a medical doctor or a pharmacist.
