toddlers
and
school
children.

SYMPTOMATIC TREATMENT OF MILD TO MODERATE PAIN AND / OR FEVER

Dosing table for babies, toddlers and schoolchildren

Body weight or age	Para-Denk 125 mg Suppos	Para-Denk 250 mg Suppos
7 - 8 kg (6 - 9 month)	SD ¹ : 1 x 125 mg paracetamol <u>max.</u> DD ¹ 3 x 125 mg suppos (Δ 375 mg paracetamol)	
9 - 12 kg (9 month - 2 years)	SD ¹ : 1 x 125 mg paracetamol <u>max.</u> DD ¹ 4 x 125 mg suppos (Δ 500 mg paracetamol)	
13 - 16 kg (2 - 4 years)		SD ¹ : 1 x 250 mg paracetamol <u>max.</u> DD ¹ 3 x 250 mg suppos (Δ 750 mg paracetamol)
17 - 25 kg (4 - 8 years)		SD ¹ : 1 x 250 mg paracetamol <u>max.</u> DD ¹ 4 x 250 mg suppos (Δ 1000 mg paracetamol)

1) SD = **single dose** in number of dosage form and amount of drug [mg] – caution with special patient groups.
DD = maximum **daily dose** (24 hours) in number of dosage form and (equivalent dose of paracetamol)
"equivalent to".

1) Special patient groups

Liver dysfunction and slight renal impairment

The dosage must be reduced and/or the dosage interval prolonged in patients suffering from impaired liver or kidney function or Gilbert's syndrome.

Severe renal failure

In cases of severe renal failure (creatinine clearance < 10 ml/min), there must be a dosage interval of at least 8 hours.

Elderly patients

No particular dosage adjustment is required.

Key benefits:

- ✓ Suitable for babies, toddlers and schoolchildren.
- ✓ Enables gentle treatment, but powerful pain and fever management.
- ✓ Suppositories give rapid pain relief with a long lasting effect.
- ✓ Ideal painkiller for patients feeling nauseous (e.g. after surgery).
- ✓ Lactose-free and gluten-free.
- ✓ **Recommended to treat symptoms of Dengue fever (WHO).**
- ✓ **Relaxed days and nights for babies, children and their parents!**
