OESTRACLIN[®]

Topical natural Estradiol

THE ADVANTAGES OF PERCUTANEOUS ROUTE

- Achieves a stable plasma rate of 80pg/ml of 17 β estradiol acting as a natural reservoir for the body, the gel affords a physiological estrogen level similar to that of the pre-menopausal follicular phase.
- Avoid first hepatic pass, resulting in less severe adverse effects.
- Better skin tolerance, without erythema, avoiding skin reactions with patch use.
- Discrete, invisible and immediate absorption.
- You can individualize the doses to each woman and at each moment to ensure the minimum effective dose in each case.

- **Application areas:**

- Optimal application area
- ✗ Area where not to apply

The mean dose is 2.5g gel a day, i.e., one applicator measure of 2.5g a day, from 21 to 31 days a month.

According to **AEEM** (Spanish menopause society) & **SEGO** (Spanish Society of gynecology and Obstetrics)

- *Start with the lowest dose and adjust according to the response.*
- *The use of percutaneous preparations avoids the first-pass effect in the liver avoiding the adverse effect of metabolites of estradiol associated with oral preparations.*
